# **Population Figures**

## **Methodology**

June 2014

---

## 1 Introduction

The *Population Figures* statistical operation has the purpose of providing, every six months, a quantitative measurement of the population with regular residence in Spain, in each Autonomous Community and in each province, at 1 January and 1 July each year, starting in 2012, broken down by sex, year of birth, age, country of nationality and country of birth. This operation is integrated within the European legislative framework governed by Regulation (EU) No 1260/2013 of the European Parliament and the Council on European demographic statistics.

The Population Figures maintain total inter-territorial and demographic consistency, which implies the complete coherence of their results with those provided in the *Vital Statistics* and the *Migration Statistics*, at all breakdown levels considered. This operation thus enables the analysis of demographic change, from the perspective of any of its components (births, deaths and migrations).

The 2011 Population Census establishes the starting point of this operation, given that it sets the figures for the resident population on the census date (1 November 2011). As of the Census, and in coherence with it, the INE has prepared the 2001-2011 Intercensus Population Estimates, whose results reach 1 January 2012, linking with the series of population figures provided by the previous Censuses and Intercensus Estimates. All the above constitutes the historical statistical series of population figures for Spain.

Thus beginning in the year 2012, the Figures are obtained for the Population resident in each Spanish province at 1 January of year  $t$  through an accounting of demographic events (births, deaths, foreign and domestic migration and acquisition of Spanish nationality by the foreign population).

In this way, the Population Figures constitute synthesis statistics, whose results will be obtained from the data provided by other statistical operations and information sources. Specifically:

- The 2011 Population Census, as the starting point of the results series.
- The Vital Statistics, as a source of data on births and deaths.
- The Migration Statistics, which will provide the data on foreign and domestic migration.
- Other information, such as the records from the Civil Registry on the acquisition on the acquisition of Spanish nationality.

---

## 2 Definitions and concepts

**Resident population:** the population resident in a given geographical scope is defined as those persons who, on the reference date, have established their regular residence therein.

**Regular residence**<sup>1</sup> is understood to be that place where a person normally spends her/his daily rest periods, not including temporary absences due to travel for leisure, holidays, visits to relatives and friends, business, medical treatment or religious pilgrimage. Nevertheless, it is important to highlight that only regular residents in a district will be considered:

- Those who, according to the previous definition, would normally have lived therein for a continuous period of at least 12 months.
- Those who, according to the previous definition, would have established their regular residence therein less than 12 months ago, but with the intention of remaining therein for at least one year.

**Nationality:** legal link between an individual and a State, acquired by birth or naturalisation if it is by declaration or acquired by choice, marriage or other terms, according to the national legislation. This refers to the nationality at the reference date, classified as Spanish so long as the individual has said nationality, though s/he may have others as well.

**Place of birth:** country of regular residence of the mother at the time of birth.

---

## 3 Calculation method

The figures are calculated, broken down by sex, year of birth, age, nationality and country of birth, and derived from the Population Figures at 1 January  $t-1$  (or the results from the Intercensus Population Estimates at 1 January 2012, in the starting year) and occurring throughout the year  $t-1$ . With this, it is possible to guarantee total consistency of the information relating to demographic flow and population stocks, in all of the territorial levels considered.

In general, the Population Figures at day 1 of each month  $m$  in a given year  $t$  are derived from the Population Figures at day 1 of the previous month,  $m-1$ , according to the following expressions:

$$P_{h,s,x,Spain,j}^m = P_{h,s,x,Spain,j}^{m-1} + N_{h,s,x,Spain,j}^{m-1} - D_{h,s,x,Spain,j}^{m-1} + I_{h,s,x,Spain,j}^{m-1} - E_{h,s,x,Spain,j}^{m-1} +$$

---

<sup>1</sup> Definition of regular residence established in *Regulation No 763/2008 of the European Parliament and of the Council on population and housing censuses* and *Regulation No 1260/2013 of the European Parliament and the Council on European demographic statistics*.

$$I_{h,s,x,Spain,j}^{m-1} - Ei_{h,s,x,Spain,j}^{m-1} + \sum_{i \neq Spain} Nac_{h,s,x,i,j}^{m-1}$$

$$P_{h,s,x,i,j}^m = P_{h,s,x,i,j}^{m-1} + N_{h,s,x,i,j}^{m-1} - D_{h,s,x,i,j}^{m-1} + I_{h,s,x,i,j}^{m-1} - E_{h,s,x,i,j}^{m-1} + I_{h,s,x,i,j}^{m-1} - Ei_{h,s,x,i,j}^{m-1} - Nac_{h,s,x,i,j}^{m-1} \text{ if } i \neq Spain.$$

Where:

$P_{h,s,x,Spain,j}^m$  is the population resident in province  $h$  of Spanish nationality, of sex  $s$ , year of birth  $x$  and country of birth  $j$  at day 1 of  $m$ .

$P_{h,s,x,i,j}^m$  is the population resident in province  $h$ , of sex  $s$ , year of birth  $x$ , country of nationality  $i$  and country of birth  $j$  at day 1 of  $m$ .

$N_{h,s,x,i,j}^m$  are the births to women residence in province  $h$ , of sex  $s$ , year of birth  $x$ , country of nationality  $i$  and country of birth  $j$  occurring throughout  $t$  ( $N_{h,s,x,i,j}^m = 0$  if  $x \neq t$ ).

$D_{h,s,x,i,j}^m$  are the deaths of residents in province  $h$ , of sex  $s$ , year of birth  $x$ , country of nationality  $i$  and country of birth  $j$  occurring throughout  $m$ .

$I_{h,s,x,i,j}^m$  are the immigrations from abroad in province  $h$ , of persons of sex  $s$ , year of birth  $x$ , country of nationality  $i$  and country of birth  $j$  occurring throughout  $m$ .

$E_{h,s,x,i,j}^m$  are the emigrations abroad of residents in province  $h$ , of sex  $s$ , year of birth  $x$ , country of nationality  $i$  and country of birth  $j$  occurring throughout  $m$ .

$Ii_{h,s,x,i,j}^m$  are the immigrations from the rest of Spain in province  $h$ , of persons of sex  $s$ , year of birth  $x$ , country of nationality  $i$  and country of birth  $j$  occurring throughout  $m$ .

$Ei_{h,s,x,i,j}^m$  are the emigrations to the rest of Spain of residents in province  $h$ , of sex  $s$ , year of birth  $x$ , country of nationality  $i$  and country of birth  $j$  occurring throughout  $m$ .

$Nac_{h,s,x,i,j}^m$  are the acquisitions of Spanish nationality of residents in province  $h$ , of persons of sex  $s$ , year of birth  $x$ , country of nationality  $i$  and country of birth  $j$  occurring throughout  $m$ .

Figures by age stem from the figures resulting of this process, under the hypothesis of uniform distribution of the effect of each phenomenon in each generation between the exact ages individuals of each generation will be at some point of the year.

Lastly, and as necessary, an adjustment is carried out regarding the beginning foreign migratory flows, for the purpose of guaranteeing total consistency between the population stocks and demographic flows occurring.

---

## 4 Dissemination of results

The dissemination of the Population Figures - and of information regarding births, deaths and migrations - takes place twice a year:

- In the month of **June each year  $t$** , the **provisional Population Figures are published at 1 January  $t$** , and **1 July  $t-1$**  (the latter update provisional figures which, for the same date, were provided in the previous month of December).
- In the month of December each year  $t$ , the following is published:
  - o The **final Population Figures at 1 January  $t$  and 1 July  $t-1$** .
  - o The **provisional Population Figures at 1 July  $t$** .
