Revisions and data updates

The data published today are final. All the results of this operation are available at [INEbase](#).

Methodological note

The objective of the Residents Travel Survey (ETR/FAMILITUR) is to provide information on the trips and excursions carried out by the population resident in Spain, both within the country and abroad, and their main characteristics (duration, expenditure, reason, accommodation, etc.).

In addition, it provides annual information on the percentage of the population travelling for personal reasons and investigates the reasons given by those who do not travel.

Type of operation: quarterly continuous survey.

Population scope: population aged 15 and over living in family homes in Spain.

Geographical scope: the entire national territory.

Reference period of the results: month, quarter, year (depending on the variable).

Sample size: the effective monthly sample is around 8,200 persons, who provide information on the trips completed in the two months prior to the interview. The results of a reference month are obtained from around 16,400 questionnaires.

Sample type: stratified three-stage random sample from the Georeferenced Address Framework. The first-stage units are census sections, the second-stage units are dwellings (a person aged 15 or over has been selected within each dwelling).

Collection method: telephone and face-to-face interviews and online questionnaire.
