Methodological note

The Service Sector Activity Indicators (IASS) measure the short-term evolution of the activity of companies belonging to the non-financial market Services through two variables: turnover and employed personnel. The turnover includes the amounts invoiced by the company for the provision of services and sale of goods. Employed personnel include both paid and unpaid personnel.

To obtain it, a continuous survey is carried out that investigates more than 27,000 companies that operate in this sector every month. The results are presented in the form of indices with the aim of measuring variations with respect to the base year 2021.

The characteristics of this statistic are:

Type of survey: continuous monthly survey.

Base year: 2021.

Population scope: companies whose main activity is described in sections G, (Commerce), H (Transportation and Storage), I (Hospitality), J (Information and Communications), L (Real Estate Activities), M (Professional Activities, Scientific and Technical) and N (Administrative Activities and Auxiliary Services) of the National Classification of Economic Activities (CNAE-09).

Geographic scope: all the national territory except for Ceuta and Melilla, for which it is only collected in division 47 of CNAE-09 (retail trade).

Sample size: 27,500 companies

Sampling type: stratified random sampling.

Collection method: internet (IRIA system), administrative register, e-mail, fax, telephone or by postal mail.
