Data revisions and updates

The data published today are final. All the results of this operation are available at [INEbase](#).

Methodological note

The main objective of the Statistics on scientific research and technological development (R&D) activities is to measure the economic and human resources devoted to research by all sectors of the economy (companies, general governments, higher education and non-profit private institutions) in order to:

- Provide a tool for the management, planning, decision-making and control of national science policy.
- Provide statistical authorities with the information they request, obtained according to international standards that allow comparability across countries.

Type of survey: annual continuous survey.

Population scope: companies, general government, universities and higher education centres and non-profit private institutions engaged in R&D activities.

Geographical scope: the whole national territory.

Results reference period: year preceding the year of data collection.

Information reference period: for expenditure: calendar year; for personnel: annual average and full-time equivalent (people/year).

Sample size: 45,000 companies, 531 public administration centres (including public hospitals), 90 universities, 133 higher education centres and 175 private non-profit institutions.

Sample type: exhaustive for directory units and random for companies that are not included.

Collection method: mixed system with mailshots and interviewer participation.
