The annual rate of the overall Consumer Price Index (CPI) in November was 2.4%, sixth tenths higher than that registered the previous month.

The groups that stood out most in terms of their influence on the increase in the annual rate were:

- **Housing**, whose annual variation stood at 7.4%, was 3.2 points higher than in the previous month. This increase was the result of higher *electricity* prices, compared to the decrease in the same month in 2023..
- **Transportation**, whose annual rate increased two points of a percentage point to -1.0%. This situation was due, for the most part, to higher prices for *fuels and lubricants used in personal vehicles*, compared with the falling prices in November of the previous year.

The annual variation rate of core inflation (general index excluding unprocessed food and energy products) decreased by one tenth of a percentage point with respect to October, and stood at 2.4%.

Annual CPI Rate

Overall and core index. Percentage

Monthly evolution of consumer prices

In November, the monthly variation rate of the general CPI was 0.2%.

The groups with the greatest positive monthly impact to the CPI monthly rate were:

- **Housing**, with a rate of 1.6% and an impact of 0.196 due to the increase in *electricity* prices.
- **Clothing and footwear**, which showed a variation of 4.2%. This reflects the behaviour of prices at the beginning of the winter season. The impact of this group to the overall CPI was 0.157.

On the other hand, among the groups with a negative monthly impact, the following stood out:

- **Leisure and culture**, which showed a variation of -1.5%, due to the decrease in *package tour* prices. The impact of this group to the overall CPI was -0.127.

Data revisions and updates

The data published today is final and is not subject to further revision. All the results are available on [INEBase](#).

Methodological note

The data published today is final and is not subject to further revision. All the results are available on [INEBase](#).

The Consumer Price Index (CPI) is a short-term indicator that measures the evolution of the prices of consumer goods and services acquired by households resident in Spain.

On the other hand, the Harmonized Index of Consumer Prices (HICP) is an indicator whose objective is to provide a common inflation measure that allows international comparisons.

Type of survey: continuous monthly survey.

Base period: 2021 (CPI) and 2015 (HICP).

Reference period for the weightings: year prior to the present year.

Sample of municipalities: 177.

Number of products: 462 (CPI) and 461 (HICP), for traditional collection, and 493 for scanner data.

Number of observations: approximately 210,000 monthly prices.

Functional classification: ECOICOP.

General calculation method: Laspeyres' Chain Index.

Collection method: interviewing agents in establishments, scanner data and centralised collection for special items.

For more information you can access the [methodology](#) and the standardised methodological report at ([IPC](#) and [IPCA](#)).

INE statistics are produced in accordance with the Code of Good Practice for European Statistics. More information on [Quality at INE](#) and [Code of Best Practices](#).
