Review and update of data

Coinciding with today's publication, the INE has updated the data of the ECSE series in the Trade sector corresponding to the last five months. The results are available at INEbase.

Methodological note

The main objective of the Short-term Stock and Inventory Survey (ECSE) is to provide the information necessary to obtain a short-term indicator that measures in the short-term the evolution of the value of inventory level in Trade and Industry.

At present, only the evolution of the level of inventories in the trade sector is published, for which a value index for the level of merchandise at the end of the month is calculated. The indices are published quarterly, although series are available both quarterly and monthly. The publication starts with the indices of the level of inventories in the Trade sector for January 2013.

Type of survey: quarterly continuous survey.

Base year: 2015.

Population scope: economic units whose main activity, classified according to CNAE-2009, is included in Section G: Wholesale and retail trade; repair of motor vehicles and motorcycles, except group 46.1: Wholesale on a fee or contract basis.

Geographic scope: the entire national territory except Ceuta and Melilla. For the statistical units whose main activity belongs to division 47 of the CNAE-2009: Retail trade, except motor vehicles and motorcycles, also includes these Autonomous Cities.

Sample size: approximately 4,900 companies from the Retail Trade Indices (RTI) sample and 3,800 from the Services Sector Activity Indicators (SSAI) sample.

Type of sampling: stratified random sampling in companies from RTI and SSAI.

Collection method: completion of the questionnaire by the respondent using one of the following methods: internet (IRIA system), email, fax, telephone or by postal mail.

For more information, you can access the methodology at:

http://www.ine.es/metodologia/t37/t3730063_2015.pdf
