Non-hotel Tourist Accommodation Occupancy Survey

December 2019 and year 2019. Provisional data

Overnight stays in non-hotel tourist accommodation decreased by 0.9% in December compared to the same month of 2018

In 2019, non-hotel overnight stays decreased by 0.4% to 126.4 million

Overnight stays in non-hotel tourist accommodation (holiday dwellings, tourist campsites, rural tourism accommodation and hostels) exceeded 6.2 million in December, 0.9% less than in the same month of 2018. Overnight stays by residents dropped 2.8%, whilst those by non-residents grew 0.2%.

The average stay stood at 4.9 overnight stays per traveller.

Travellers and overnight stays in collective non-hotel tourist accommodation during the month of December were:

December 2019	Arrivals	Overnight stays
Residents	762,462	2,158,994
EU Residents (excluding Spain)	414,473	3,501,279
Rest of the world	112,999	598,067
TOTAL	1,289,934	6,258,340

Holiday Dwellings

Overnight stays in holiday dwellings decreased by 2.2% in December. Resident overnight stays decreased by 3.8% and non-resident overnight stays did so by 1.7%.

It should be noted that the annual variation rates of overnight stays in tourist apartments show negative growth over the last months (with the exception of April and August 2019, when Easter and summer vacations took place, respectively). This is mainly due to holiday apartments that are being reclassified as holiday dwellings for tourist use; therefore leaving the observational scope of the Holiday Dwellings Occupancy Survey (EOAP).

The average stay decreased by 4.1% as compared with December 2018, standing at 5.6 overnight stays per traveller.

In December, 31.0% of the bedplaces available for holiday dwellings were occupied, 5.2% less than in the same month of 2018. The weekend occupancy rate by bed-places was 34.6%, with a decrease of 3.1%.

Revision and updating of data

Coinciding with today's publication, the INE has updated the data for December 2018 in the Holiday Dwelling Price Index (HDPI), the Tourist Campsite Price Index (TCPI) and the Rural Tourism Accommodation Price Index (RTAPI). Meanwhile, the occupancy survey data published today is provisional and will be reviewed in the third quarter of the year.

Methodological note

The main objective of the Holiday Dwelling Occupancy Survey (HDOS) is to ascertain the behaviour of a series of variables that make it possible to describe the segment that occupies this type of accommodation within the tourist sector, both from the point of view of supply and demand.

The Holiday Dwelling Price Index (HDPI) is a statistical measure of the monthly evolution of the prices offered by holiday dwelling establishments to their clients.

Type of operation: on-going monthly survey.

Population scope: holiday apartment establishments and/or companies operating holiday apartments.

Geographical scope: the entire national territory, with the exception of Ceuta and Melilla where there are no establishments of this type.

Reference period for the results: monthly.

Reference period of the information: The consultation of basic data refers to a fortnight of the month, chosen randomly, in such way that the complete month is covered among all establishments.

Type of sampling: stratified sampling by province and establishment size, and stratified at island-size level for Canarias and Illes Balears.

Collection method: questionnaire filled in directly by the establishment.

For more information on these statistical operations, you can consult the [methodology and the standardised methodological report](#) for each of them in INEbase.

The main objective of the Campsite Occupancy Survey (COS) is to ascertain the behaviour of a series of variables that make it possible to describe the segment that this type of accommodation occupies within the tourist sector, from the viewpoint of both supply and demand.

The Tourist Campsite Price Index (TCPI) is a statistical measure of the monthly evolution of the prices offered by campsites to their clients.

Type of operation: on-going monthly survey.

Population scope: camping establishments.

Geographical scope: the entire national territory, with the exception of Ceuta and Melilla, where there are no establishments of this type.

Reference period for the results: monthly.

Reference period of the information: seven consecutive days of each month, chosen randomly in such way that all the establishments cover the whole month.

Sample size: approximately 1200 establishments.

Type of sampling: comprehensive survey in all provinces.

Collection method: questionnaire filled in directly by the establishment.

For more information on these statistical operations, you can consult the [methodology and the standardised methodological report](#) for each of them in INEbase.

The main objective of the Rural Tourism Accommodation Occupancy Survey (RTAOS) is to ascertain the behaviour of a series of variables that make it possible to describe the fundamental characteristics of this type of accommodation within the tourist sector, both from the point of view of supply and demand.

The Rural Tourism Accommodation Price Index (RTAPI) is a statistical measure of the monthly evolution of the prices that entrepreneurs of this type of accommodation apply to their clients.

Type of operation: on-going monthly survey.

Population scope: rural tourism establishments registered as such in the corresponding register of each Autonomous Community.

Geographical scope: the entire national territory, with the exception of Ceuta and Melilla, where there are no establishments of this type.

Reference period for the results: monthly.

Reference period of the information: The consultation of basic data refers to all the days of the month.

Type of sampling: comprehensive survey in all provinces except those where the population size is large enough to take a sample.

Collection method: questionnaire filled in directly by the establishment.

For more information on these statistical operations, you can consult the [methodology and the standardised methodological report](#) for each of them in INEbase.

The main objective of the Hostels Occupancy Survey (HOS) is to ascertain the behaviour of a series of variables that make it possible to describe the fundamental characteristics of this type of accommodation within the tourist sector, both from the point of view of supply and demand.

For more information on this statistical operation, you can consult the [methodology and the standardised methodological report](#) in INEbase.

² To facilitate the comparability between data from different Autonomous Communities (and because of the different regulation and different characteristics),

a group called rural house has been created, with those establishments with similar typology (location, capacity, etc...).

The variables included in the previous table have been estimated with that type of establishments.

¹ To facilitate the comparability between data from different Autonomous Communities (and because of the different regulation and different characteristics), a group called rural house has been created, with those accommodations with similar typology (location, capacity, etc...).

The variables included in the previous table have been estimated with that type of establishments.

The variables shown in the table have been estimated with the type of accommodation under rural tourist accommodation.
