

Labour and Geographical Mobility Statistics (LGMS) Year 2022

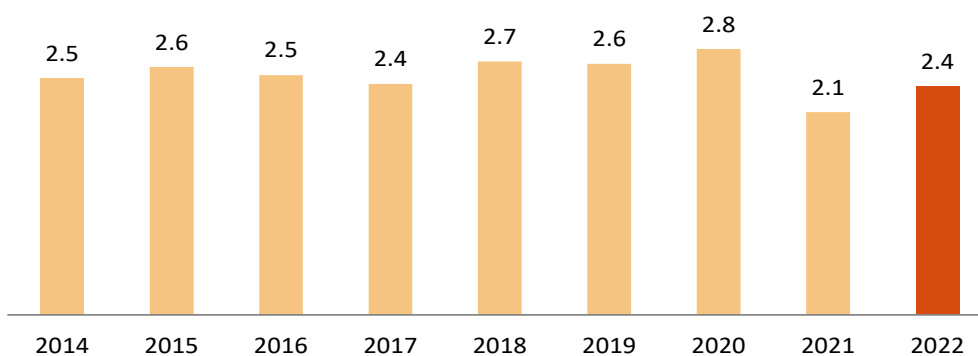

Main results

- 2.4% of employed persons in the first quarter of 2022 have changed their municipality of residence less than a year ago. For most of them, it within the same province.
- Almost one in three employed persons (29.8%) has not changed municipality of residence since birth.
- 3.4% of salaried employees with a temporary contract have changed municipality of residence less than a year ago, as compared with 2.2% of those with a permanent contract.
- 4.0% of unemployed persons have changed their municipality of residence less than a year ago, as compared with 3.5% in 2021. 28.9% have not changed their municipality of residence since birth.
- Geographical mobility, both of employed and unemployed persons, is much greater for foreign nationals than for Spaniards.
- The communities with the greatest geographical mobility of those employed in the last year are Comunidad de Madrid (3.6 %), Illes Balears (3.4 %) and Cataluña (2.6%). Those with the least mobility of the unemployed were Extremadura (91.8 % of unemployed persons have not changed their municipality of residence during the last five years), Andalucía (86.0%) and La Rioja (81.9%) .

Mobility of the Employed

The mobility of the employed presented an upward trend until 2020, and decreased following that year. In 2022 the percentage of employed persons who have changed their municipality of residence in the last year was 2.4%, as compared with 2.1% in 2021.

Employed persons who have changed municipality of residence less than one year ago. Percentage

In absolute terms, 481,100 out of 20,084,700 employed persons in the first quarter of 2022 have been living in the current municipality for less than one year.

On the other hand, there were 16,774,200 employed persons (83.5% of the total) who have been living in the same municipality for five or more years.

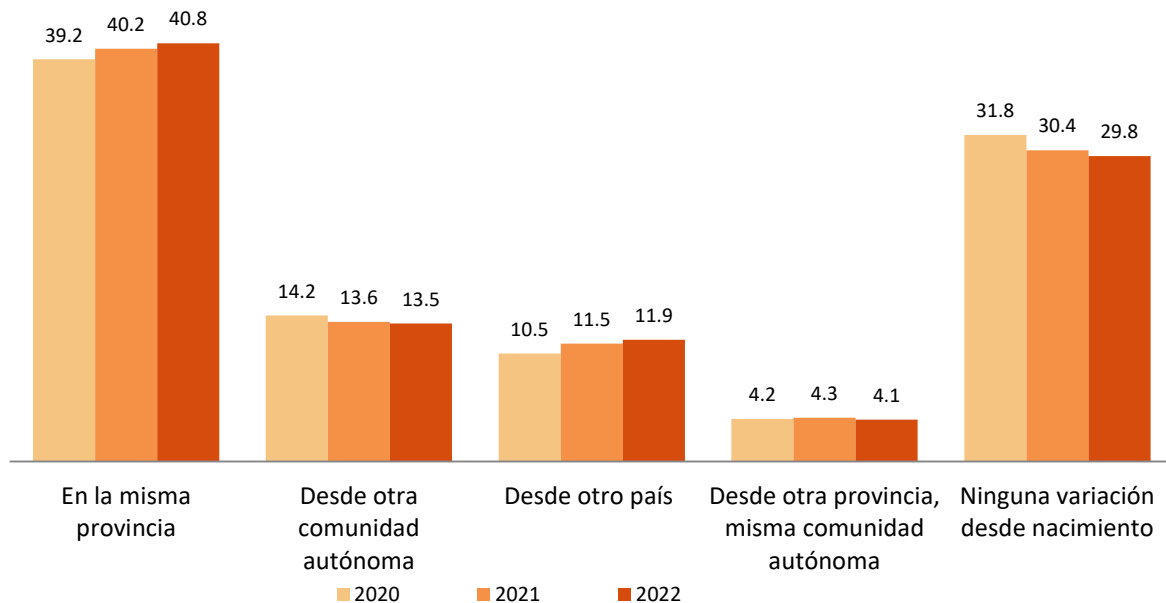

Almost three in ten employed persons (29.8%) has not changed municipality of residence since birth. 40.8% have changed municipality within the same province, 4.1% came from another province in the same Autonomous Community, 13.5% from another Autonomous Community and 11.9% from another country.

Mobility of employed persons by location of the previous municipality of residence and time of residence in the current municipality

Units: thousands of persons and percentage

Year 2022	Time of residence in the current municipality				
	Absolute values

Mobility of the Unemployed

The mobility of the unemployed showed an upward trend until 2020, when a historic drop was recorded in the series. In 2022, there was once again an increase in the percentage of unemployed persons who changed their municipality of residence the previous year: this percentage went from 3.5% in 2021 to 4.0%.

Unemployed persons who have changed municipality of residence less than one year ago. Percentage

In absolute terms, 127,300 out of 3,174,700 unemployed persons in the first quarter of 2022 have changed municipality of residence in the last year. In turn, 2,513,400 (79.2% of the total) have spent at least five years residing in the same municipality.

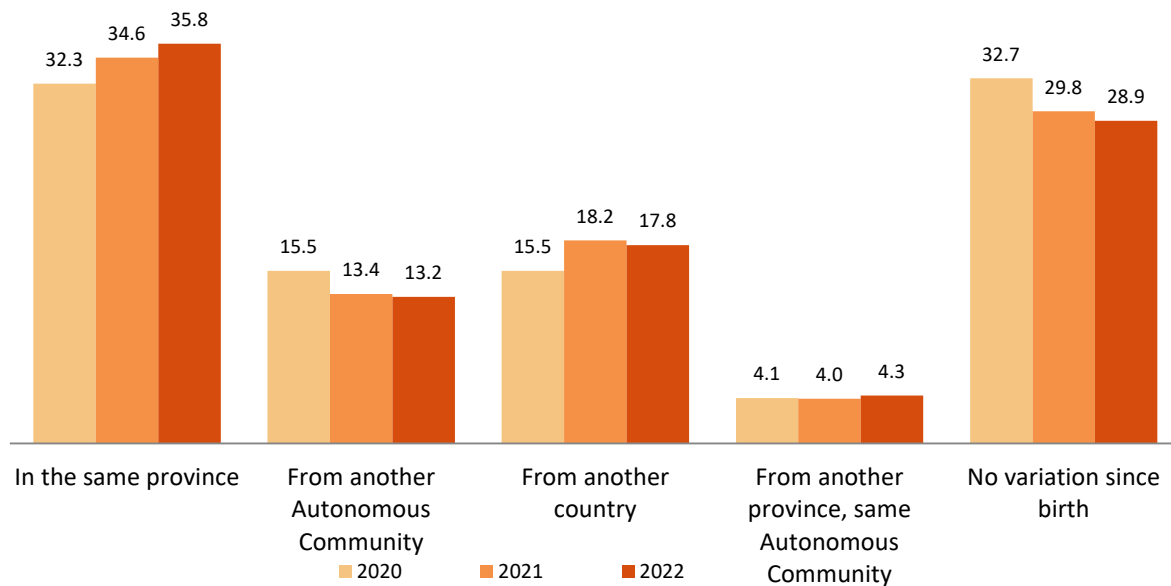

28.9% of unemployed persons have not made any change in municipality of residence since birth, 13.2% have arrived at their current municipality from another Autonomous Community and 17.8% from abroad.

Labour and geographical mobility by autonomous communities

The autonomous communities with the greatest geographical mobility of those employed in the last year are Comunidad de Madrid (3.6%), Castilla-La Mancha (3.4%) and Cantabria (2.6%).

For their part, those with the least mobility are Extremadura (1.3 %), Aragón (1.4 %) and País Vasco (1.4 %).

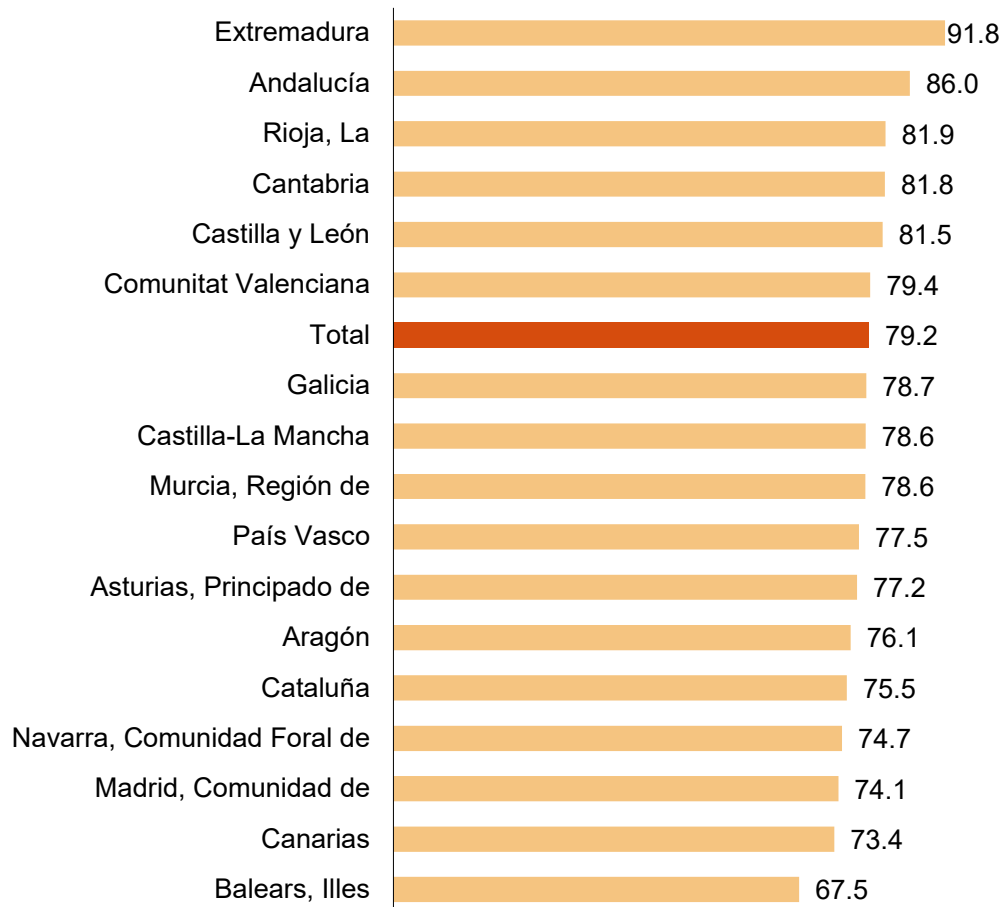

Employed persons who have changed their municipality of residence less than one year ago, by Autonomous Community of current residence. Percentage

As regards unemployed persons, the Autonomous Communities with less geographical mobility measured in terms of highest percentage of unemployed residents in each of them who have not changed their municipality of residence at least during the last five years, were Extremadura (89.6%), Andalucía (87.0%) and La Rioja (86.0%).

On the other hand, communities where the unemployed were more mobile were Illes Balears (67.5 %), Canarias (73.4 %) and Comunidad de Madrid (74.1 %).

Unemployed persons who have not changed municipality of residence in at least five years, by Autonomous Community. Percentage

Methodological note

The Labour and Geographical Mobility Statistics (LGMS) investigates the relationship between the employability of persons and their willingness to change residence, through the joint study of labour characteristics and the time they have been residing in the municipality.

To this end, the LGMS incorporates specific variables derived from the INE Municipal Register (population base resulting from the coordination of the Municipal Registries) into the sample of the Economically Active Population Survey (EAPS). In this way, it is possible to relate the demographic and labour variables contained in the EAPS with the geographical mobility registered in the administrative source. With regard to the latter, only changes of inter-municipal residence will be taken into account, since changes of domicile within the same municipality are not relevant for employment purposes.

Type of operation – Annual structural survey.

Population **scope** - Population 16 and over living in family homes in Spain.

Geographical scope – The entire national territory.

Reference period for the results – First quarter of 2022.

Information Reference Period - First quarter of 2022 for the data from the Economically Active Population Survey (EPA) and the latest census variation available in the INE Municipal Register.

Sample size – 3,822 census tracts¹ and around 58,000 homes and 122,000 people. Of the 3,822 tracts, 234 correspond to the additional sample of Galicia.

Type of sampling – Two-stage sampling with stratification in the first stage units. The first stage units are the census tracts and the second stage units are the inhabited family dwellings.

Collection method - Combination of the information collected in the EPA, with the data from the INE Municipal Register.

¹ In 2021 the progressive change of sectioning began. This restructured the sample into a greater number of sections and a smaller number of dwellings interviewed per section. The process will conclude in 2024, with a total of 5,298 sections and 14 dwellings surveyed per section.
