High Technology Indicators
Year 2016

Turnover of High and Medium-High Technology companies stood at 249,864 million euros in 2016

Exports of High Technology products increased by 8,0% and imports did so by 1.3%

In 2016, high- and medium-tech companies achieved a turnover of 249,864 million euros. This figure generated a value added of 72,207 million.

Main High Technology indicators Year 2016¹

Economic data in thousands of euros

CNAE 2009		Número de empresas	Cifra de negocios	Valor añadido
Sectores manufactureros de alta y media-alta tecnología		20,863	174,089,314	39,425,331
Sectores manufactureros de alta tecnología		2,800	26,571,705	8,298,736
21	Fabricación de productos farmacéuticos	350	13,728,349	4,783,437
26	Fabricación de productos informáticos, electrónicos y ópticos	2,347	4,129,771	1,413,172
303	Construcción aeronáutica y espacial y su maquinaria	103	8,713,585	2,102,128
Sectores manufactureros de media-alta tecnología		18,062	147,517,609	31,126,595
20	Industria química	3,409	37,132,230	8,466,825
254	Fabricación de armas y municiones
27 a 29	Fabricación de material y equipo eléctrico; Fabricación de maquinaria y equipo n.c.o.p; Fabricación de vehículos de motor, remolques y semirremolques	9,044	104,420,244	20,653,301
30-301-303	Fabricación de otro material de transporte excepto: construcción naval; construcción aeronáutica y espacial y su maquinaria
325	Fabricación de instrumentos y suministros médicos y odontológicos	5,289	1,791,964	761,148
Servicios de alta tecnología		62,703	75,775,164	32,781,897
59 a 63	Actividades cinematográficas, de video y de programas de televisión, grabación de sonido y edición musical; Actividades de programación y emisión de radio y televisión; Telecomunicaciones; Programación, consultoría y otras actividades relacionadas con la informática; Servicios de información	56,633	73,744,307	30,649,681
72	Investigación y desarrollo	6,070	2,030,856	2,132,215

¹ In 2016, a number of methodological improvements have been implemented in the Structural Business Statistics. Consequently, **the results are not strictly comparable to those of other years**. More information in the methodological note of this press release.

Turnover of the manufacturing companies in the High and Medium-High Technology sector stood at 174,089 million euros. This figure represented 69.7% of the sector's turnover and generated an value added of 39,425 million euros.

On the other hand, the turnover of companies in the high-tech services sector was 75,775 million euros and generated an value added of 32,782 million euros.

Employment in the High Technology sectors

Employment in the high-tech sectors increased by 3.0% with respect to the previous year, according to the Economically Active Population Survey (EAPS).

The number of employed persons in the high-tech manufacturing sectors fell by 6.2%, while employment in the medium-high tech sectors grew by 6.5%. In turn, occupancy in high-tech services increased by 1.9%.

High-tech sectors employed 7.0% of the total number of employed persons in the Spanish economy in 2016. 28.4% of the total persons employed in these sectors were women.

Foreign trade of High Technology products

In 2016, exports of High Technology products increased 8.0% to a total of 14,923 million euros.

In turn, imports registered an increase of 1.3% reaching 25,736 million euros.

Variation in exports and imports. Period 2011-2016

Fuente: Elaboración propia a partir de datos de la Agencia Estatal de la Administración Tributaria

The highest coverage rate (quotient between exports and imports, in percentage terms) in the foreign trade of high technology products corresponded to the group *Weapons and ammunitions* (218.8%).

In turn, the group *Office machinery and computers* registered the lowest rate (21.7%).

Methodological note

The annual statistics on High Technology indicators is a summary statistic that provides data on high technology production in Spain. Some of the variables provided by these statistics are: the number of companies, turnover, value added, rate of innovation, etc. in high-tech sectors or the value of production, exports and imports, etc. for high-tech products.

Considering technology as the stock of knowledge needed to produce new products and processes, High Technology is characterised by a fast renewal of knowledge, much greater than other technologies, and by its degree of complexity, which requires a continuous effort in research and a solid technological base.

For statistical purposes, the definition of High Technology is performed by a comprehensive listing of the branches of activity (**sector approach**) and of products (**product approach**) that are considered, at a given moment in time, to be of high technological content.

In order to determine the list of High Technology activities and products, we have started with the methodological tasks performed by the OECD in this matter, as well as with adaptations thereof to the European scope performed by Eurostat.

Lista de sectores de alta tecnología	
CNAE 2009	SECTORES
Sectores manufactureros de alta tecnología	
21	Fabricación de productos farmacéuticos
26	Fabricación de productos informáticos, electrónicos y ópticos
30.3	Construcción aeronáutica y espacial y su maquinaria
Sectores manufactureros de media-alta tecnología	
20	Industria química
25.4	Fabricación de armas y municiones
27 a 29	Fabricación de material y equipo eléctrico; Fabricación de maquinaria y equipo n.c.o.p.; Fabricación de vehículos de motor, remolques y semirremolques
30- 30.1 - 30.3	Fabricación de otro material de transporte excepto: construcción naval; construcción aeronáutica y espacial y su maquinaria.
32.5	Fabricación de instrumentos y suministros médicos y odontológicos
Servicios de alta tecnología	
59 a 63	Actividades cinematográficas, de video y de programas de televisión, grabación de sonido y edición musical; Actividades de programación y emisión de radio y televisión; Telecomunicaciones; Programación, consultoría y otras actividades relacionadas con la informática; Servicios de información.

The study of High Technology from the product perspective is based on the construction of indicators that reflect the technological content of the goods produced and exported by a country or industrial sector.

The tables shown in this statistical operation are compiled with the results of the following INE operations: Structural Business Statistics: Industrial Sector and Services Sector; Statistics on R&D Activities; Survey on Innovation in Companies; Economically Active Population Survey; Quarterly Labour Cost Survey; Industrial Products Survey and Survey on the Use of

Information and Communication Technologies and Electronic Commerce in Companies. And also of Foreign Trade Statistics (own elaboration from data of the Tax Agency).

Methodological improvements

For the reference year 2016, several methodological improvements have been implemented on Structural Business Statistics, within the framework of the “Integration Project of the Structural Business Statistics”. As a consequence of these changes, **the results presented today are not strictly comparable to those of other years** since the evolution of variables is due not only to possible real changes produced in this period, but also to the effects of the methodological improvements on the estimation of said variables. This effect is more pronounced for the variable number of companies in the Trade and Services Sectors, and relatively small for the rest of the information.

For more details, you can refer to the specific document “Measure of the impact of the methodological changes in Structural Business Statistics 2016”:

http://www.ine.es/metodologia/t37/metodologia_eee_cambios2016.pdf
