

Agriculture, livestock and fishing

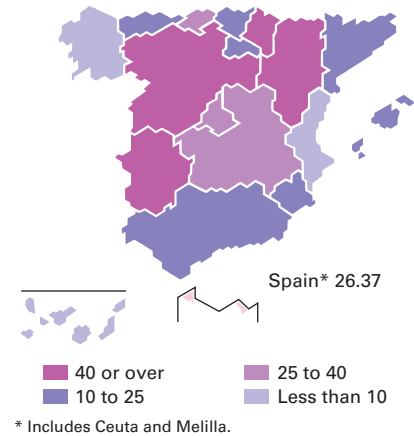

Farms and agricultural area. 2020

UAA in hectares

UAA per farm. 2020

Hectares

Pigs, cattle and poultry predominate

The latest census data set the number of farms at 914,871, 7.6% less than in the previous census (2009). The average UAA per farm increased to 26.37 ha, the highest value in the historical series. Castilla y León has the largest average area, with 63.02 ha.

The number of farms with cattle is 169,576, 30.1% less than in 2009. Regarding the number of livestock units, pigs, cattle and poultry predominate.

One quarter of the EU aquaculture production

A fourth of the 2021 aquaculture production in the EU came from Spain (24.6%), according to Eurostat data. In addition, Spain was the country with the most tons of live weight fish captures.

2024, International Year of Camelids

In Spain there is native breed of camelids known as the *Canary Islands camel*, which dates back to the European colonization of Islas Canarias and comes from Africa. This breed is found mainly in Lanzarote, south of Las Palmas and Fuerteventura. In all cases, this is related to the tourism sector.

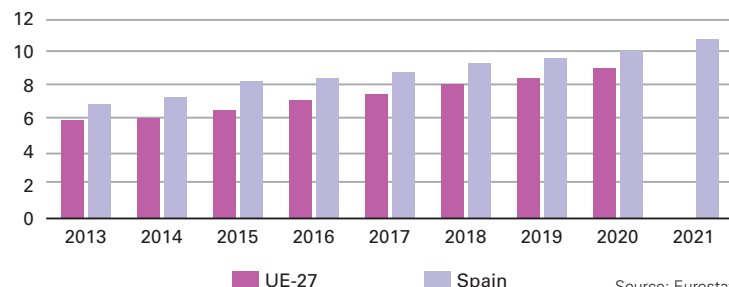

In 2021, 10.8% of Spain's UAA came from organic agriculture.
