Continuing the trend which started more than 30 years ago, the National Statistics Institute is presenting a new edition of Spain in Figures both in Spanish and English.

This is a general publication whose objective is to provide an updated panorama of the most relevant demographic, social and economic aspects of our country and its surrounding environment, showing data from multiple statistical sources apart from the INE.

In view of suggestions from users, this year's edition has renewed its content aiming to make it easier to read statistical data, reducing the number of tables and offering in exchange more textual content which helps to provide an understanding of the evolution of the different indicators presented.

The whole publication is accessible via the Internet on the INE server (www.ine.es). In the section INEbase, the content of this publication and any statistical subject may be examined in greater depth.

We hope that this publication fulfils its main objective: to show citizens who are not used to reading statistical data, that they allow us to know and evaluate better our economic and social reality.

Finally, we would like to thank informants whose collaboration facilitates making this data available.

Carmen Alcaide Guindo

INE President

Area of Spanish provinces (Km²)

Source: General Directorate of the National Geographical Institute

Badajoz is the largest province

Spain, with an area of 505,182 km², occupies 84.6% of the Iberian peninsula. It is divided into 17 autonomous communities and two autonomous cities.

The climate is very varied, both considering rainfall and temperature. There are very rainy areas in the Northand other extremely dry areas in the South. The Mediterranean climate predominates, although more notable the due to its situation opposite the African coast, is the climate in the Canary Islands with an annual average temperature of 22°C according to data from the National Meteorological Institute.

The majority of Spanish rivers carry very little water and are therefore not appropriate for domestic navigation with the exception of the Guadalquivir, although only for shallow draught boats and along the last 100 kms.

Teide is the most visited

The largest national park in Spain is Sierra Nevada with more than 86 thousand hectares, followed by the Picos de Europa with 64 thousand; the smallest with just 1,928 ha., is the Tablas de Daimiel in the autonomous community of Castilla-La Mancha.

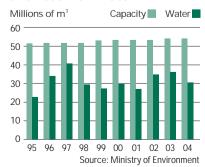

During 2004, the national park of Teide was the most visited with 3.5 million people, 5.2% more than the previous year. However, it is necessary to stress the annual increase in the number of visitors to Sierra Nevada (77.3%) and Garajonay (34%) on the Island of Gomera.

Reservoirs

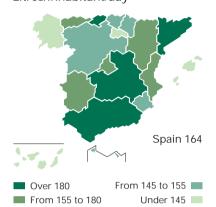

The capacity of peninsular reservoirs in 2004 stood at 53,998 million cubic metres, while the average quantity of reservoir water was 30,427 million, 16.1% less than the previous year.

Water consumption

In Spain 4,783 Hm³ of water was available for urban public supply during 2002 according to the Survey on the supply and treatment of water. Of this amount, 80.6% was distributed for consumption by families, companies, municipal consumption, etc. In public distribution networks, 19.4% of the available water was lost in leaks or breakages. The volume of water lost (927 Hm³) was 0.6% less than that registered in 2001.

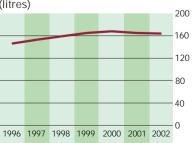

The consumption of water by Spanish families increased this year and represents 65% of the total. Average consumption was 164 litres per inhabitant and per day. Castilla-La Mancha had the highest average consumption (185 litres) and Illes Balears the lowest (127).

The average price of water increased by 6.6% in 2002 up to 0.81 euros/m³.

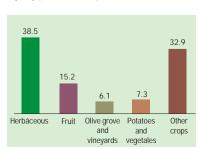

Water consumption in the agricultural sector

The agricultural sector used 17,115 Hm³ of water during 2002. According to the Survey on the use of water in the agricultural sector, the consumption of agricultural operations was 17,083 Hm³ which represents an increase of 2.5% with respect to 2001.

Waste

In 2002, more than 24 million tonnes of mixed urban waste were collected in Spain, 0.02% less than in 2001. All communities exceeded 450 kg/inhab., but Illes Baleares collected the highest quantity with 734 kg/inhab. As regards to selective collection, a total of 16.3 kg/inhab. of paper and cardboard and 14.8 kg/inhab. of glass were collected.

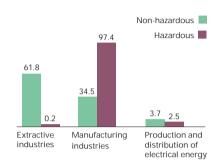

For its part, the Spanish industry generated 59 million tonnes of waste during 2002. The majority of waste generated in extractive industries was mineral waste which originated from the same productive process as a consequence of the use of carbon ore. Castilla y León and Principado de Asturias are the communities which generate the most waste 43.5% and 18.2% of the total respectively, due to mining. Moreover, Principado de Asturias is the community which most increased its waste between 2001 and 2002, from 3.4 to 10.7 million tonnes. Cataluña, País Vasco and Andalucía generate 68.8% of the total hazardous waste.

Industry expenditure on environmental protection

According to the Survey on the Expenditure of Environmental Protection Companies, expenditure stood at 1,891.2 million euros in 2002, 28% more than in 2001. The majority of investment concentrated on reducing atmospheric emissions (27.4% of the total) and on the prevention and treatment of waste water (24%). The chemical sector invested the most on environmental protection equipment (136 million euros).

The Waste Statistic is made up of the following surveys: Survey on the generation of waste in the industrial and services sector and the Survey on the collection and treatment of urban waste.

Population has now exceeded 43 million

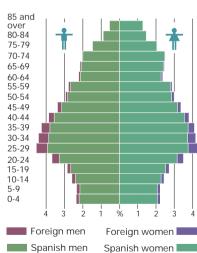

According to the latest data available from the register on 1 January 2004, the registered population of Spain is 43,197,684. Annual registry figures are declared official by the government by means of a Royal Decree published in the Official State Gazette. They are obtained after coordination by the INE on municipal registers (administrative registers from town councils where municipality residents are recorded).

This population is not distributed homogeneously over the whole country. Average density for Spain is 86 inhabitants per km². However, major differences are observed by autonomous communities. The Comunidad de Madrid has the highest population density with 724 inhab/km²; this is followed by a much lower figure, País Vasco (298) and Canarias (257). Conversely, Castilla-La Mancha with 23, Aragón and Extremadura with 26 inhab/km² are those with the lowest density. On a provincial level, population density varies between 9 inhab/km² for Soria and Teruel and 724 for Madrid.

Population density by autonomous communities (inhabitants/km²)

Spanish and foreign population pyramid

Population pyramids indicate distribution by ages and sex for a determined group. The pyramid of Spanish residents has "fattened" centrally due to the arrival of foreign young people which implies a deceleration of the population aging process if the same rhythm of growth continues.

The average age of the resident population in Spain on 1 January 2004 is 40.42: 40.99 for Spaniards; 32.82 for resident foreigners.

Evolution of the population

Population censuses, which despite the different socio-economic characteristics of the population on any level of geographical breakdown, show how the Spanish population has grown in the last century.

Census data for 2001 reflect a population which exceeded the threshold of forty million inhabitants, more than double the population in 1900.

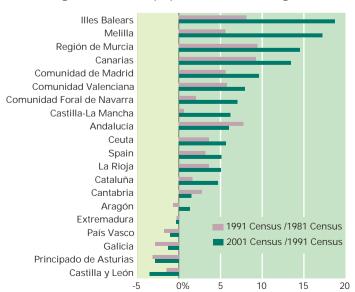

Population has not grown uniformly over the century. The last decade experienced more growth than the decade before it, but growth rates were considerably lower than in the 1960's and 1970's.

Natural growth (difference between the number of births and deaths) was 56,134 inhabitants in 2003, higher than in 2002 (49,980 inhabitants).

This increase in natural growth was provoked by the increase in children born to foreign mothers, which was 53,306.

The autonomous communities which registered higher natural growth in absolute terms were Comunidad de Madrid, Andalucía and Cataluña. Conversely, Galicia, Castilla y León, Principado de Asturias and Aragón registered the lowest natural growth.

Population of foreigners residing in Spain. 2004

Foreigners in Spain: more than three million

The arrival of foreigners has contributed to population increase in such a way that there were 3,034,326 foreigners registered in Spain on 1 January 2004: 7% of total inhabitants.

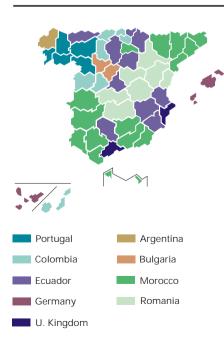

More than half come from Central and South America (35%) and the EU-25 (21%).

Ecuadorians are the most numerous foreign nationality in Spain (15.7%) followed by Moroccans (13.9%), which were the most numerous up until 2002.

There are more men (52.9%) than women among foreigners although there are significant differences according to origin. The foreign population is basically male in the case of Moroccans (66.3%) and Italians (59.8%) and female in the case of Colombians (56.9%) and Peruvians (55%). The population in the United Kingdom and Germany is evenly distributed.

In general there is a greater concentration of foreigners in the Mediterranean coast provinces, archipelagos and centre of the peninsula.

Main birth and fertility indicators. 2003

(1) Gross birth rate: number of live births per 1,000 inhabitants

* 2002 data

Age of mother at birth of first child

Fertility is gradually on the rise

Vital statistics which basically refer to births, deaths and marriages in Spain constitutes one of the most traditional statistics from the INE. 23,345 births were registered in 2003, more than the previous year. This increase was due in part to the fertility of foreign women. Moroccan women had the most children in 2003: 19.7% of the total births to a foreign mother.

The fertility rate in Spain continues its recovery and is reaching its highest value since 1993: 1.3 children per woman.

The average age at birth of the first child has increased by 4 years since 1975.

The percentage of births outside marriage continues to increase: from 10% in 1991 to 21.8% in 2002.

Women from countries which joined the EU-25 in May 2004 by and large have less children than the rest of the European Union countries whose average was 1.48 children per woman in 2003.

Births from foreign mothers

Evolution of life expectancy

Spanish women live the longest in Europe

383,729 deaths were registered, 17,191 more than in 2002. The gross mortality rate (number of deaths for every 1,000 inhabitants) increased up to 9.16 from 8.9 the previous year.

The number of deaths of foreigners in our country was 8,706 (2.3% of the total). 73.7% of these were Europeans who are the foreigners resident in Spain with the oldest average ages.

In 2003, life expectancy at birth of Spanish men and women was 77.2 and 83.7 years respectively which makes Spaniards the longest living women of the EU-25. Spanish men occupy second position, behind Swedish men (77.9 years).

Less weddings and later in life

210,155 marriages were registered in 2003. The gross marriage rate was 5.02, slightly less than the 5.07 registered in 2002.

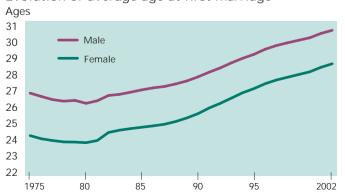

It is worth noting that in 25,618 marriages at least one of the parties was foreign which represents 12.19% of the total. 44% of these marriages were between Spanish men and foreign women, 30% between Spanish women and foreigners, and 26% between two foreign spouses.

People are getting married increasingly later in life: 30.6 for men and 28.6 for women in 2002.

The same occurs in the European Union, in 2002 the highest age was registered in Sweden: 30.1 in the case of women and 32.5 in the case of men.

Only 563,785 of the 9 and a half million couples registered in Spain in 2001 are de facto, which represents 6% of the total. This figure has multiplied by 2.5 since 1991.

Evolution of non-university foreign student body

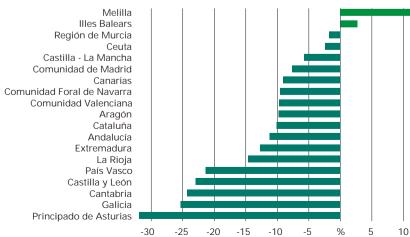

Significant increase in the number of foreign students

According to data from the Non-University Education Statistics elaborated by the Ministry of Education and Science (MES), the number of students enrolled in non-university education is approaching 7 million for the 2004-05 academic year, 11.4% less than 10 years ago. The largest increase was for nursery education (5.1% with respect to the previous year).

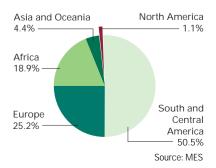

The number of foreign students has multiplied by 8 in the last 10 years. During 2003-04 the figure was 389,726 students (5,7% of the total). Comunidad de Madrid with 10.2% and Illes Balears with 10.1% had the highest percentage of foreign students.

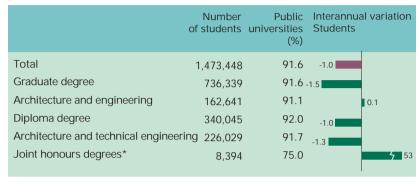

The number of non-university education professors is 571,780, resulting in a 1.6% increase compared to the previous academic year. The ratio of the number of students/professor has changed from 16.9 in 1994-95 to 12.2 in 2004-05.

Increasing number of students in the UNED (Spanish Open University)

According to data from the University Education Statistics elaborated by the INE, the student body decrease which started four years ago is continuing. However, the number of students enrolled in the UNED increases annually. The figure in 2003-04 stood at 141,682, denoting a 10.1% increase with respects to the previous year.

The majority of students enrol in long term studies (62%), although since the 1996-97 academic year there is an upward trend in short term study enrolment.

By education branches, in 2003-04 the significant weighting of social, legal (48.5%) and technical (27%) sciences is noteworthy. Nevertheless, since the 1996-97 academic year there has been a fall in enrolments in the social sciences fields, and an increase in technical fields.

In Spain in 2001, total public expenditure on education as a percentage of gross domestic product was 4.4%. This data was seven decimals lower than the European Union average (5.1%).

The number of published books is declining

The number of titles (books and leaflets) published in Spain during 2004 was 60,492 (this figure does not include reprints), a 16% decrease with respect to 2003 according to data from the Book Publishing Statistics. Comunidad de Madrid with 20,742 titles and Cataluña with 15,612 are the autonomous communities with the highest editorial production. On the other hand, the number of published copies is 214 million, 10.6% less than in 2003.

The average print run is 3,530 copies per title, a 6.5% increase with respect to the previous year. 78.6% of the total of published books are in Spanish.

A lot of television and not many books

According to the Time Use Survey 2002-2003, 21.5% of Spaniards read on average 1 hour a day (1h 07 min). Reading the press is an activity exercised mainly by men (14% read the press during the day) whilst women read a greater amount of books (6%). Listening to the radio is also an activity carried out mainly by men.

82% of Spaniards watch television as a main or secondary activity for an average of 2h 30 min a day.

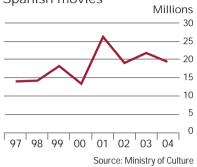

There are significant differences between men and women regarding the use of time. On an average day, women have one hour less free time than men - although they work nearly two hours less- as they spend three hours more on domestic chores and caring for the household's children and adults.

Number of spectators of Spanish movies

A bad year for the Spanish film industry...

In 2004, although the number of cinemas in Spain reduced 5.9% with respect to the previous year, there was a constant increase in the number of screens; in ten years this has multiplied by 2.2.

The total number of spectators in 2004 exceeded 143 million and increased 4.6% with respect to the previous year. However, the number of Spanish cinema spectators reduced by 11.2% with respect to 2003. The number of Spanish film spectators reached its peak in 2001, with 26.2 million.

The figure for total takings during this period has exceeded 691 million euros, 8.1% more than the previous year. This increase is due mainly to greater takings for foreign films (11.1%).

In 2001, the average price of a cinema ticket was 4.2 euros in Spain. This, together with Portugal was the lowest in the former EU-15.

... but not so bad for the performing arts

Conversely, in the field of the performing arts, both theatre performances and lyrical events increased in 2003 with respect to the previous year. However, there was a reduction in dance performances.

The number of spectators who went to the theatre increased by 7.5% with respect to 2002.

We feel fine...

According to the National Health Survey 2003, 71.3% of Spaniards consider that their state of health is good or very good. This data contrasts with the fact that 54.6% recognise that they have taken medicine in the two weeks prior to the study. Women take more medicine than men and the figure increases with age. The proportion rises to 85.7% in persons aged 65-74 and 91.9% in those aged 75 or older.

... but we go to the doctor and the hospital

28.5% of the population have gone to the doctor during the two weeks prior to the survey (24.3% of men, 32.5% of women). The main reason, 46% of consultations, has been to obtain a diagnosis or receive treatment.

Women went to the dentist more frequently than men. Of every 100 women, 38.5 did not let more than a year pass from the last consultation compared to 33.7 in the case of men.

8 million people were vaccined against flu in the 2002 campaign. Of these, 55% are 65 or older.

74.1% of women aged 16 or older consulted a gynaecologist at some time for reasons different to pregnancy or childbirth. The reason for the last visit was a periodical revision in 76.4% of cases.

9.2% of the population was hospitalised and nearly 30% of the population used emergency services. In fact, of the total hospital admissions, 56.4% was via emergency services.

Bronchial and lung cancer	18,095	11.7	-0.5	
Chronic diseases of the lower respiratory tracts	16,841	25.9		5 10.7

According to the Death Statistics by Cause of Death, in 2002 there were 368,618 deaths in Spain, 2.4% more than in 2001.

Cardiovascular diseases are the primary cause of death in Spain (34.1% of deaths). Among these, ischaemic heart diseases (acute myocardial infarction, chest angina, etc.) are notable with 39,400 deaths. Tumours, the second most frequent cause of death, are responsible for 26.5% of deaths. However, among young people aged 15-34 the main cause of death is road accidents.

Different sexes, different causes

In the case of women, cerebrovascular and ischaemic heart diseases are the main causes: 21,018 and 17,119 deaths. The most significant tumour is breast cancer with 5,772 deaths, although there has been a reduction of 2.4% with respect to 2001. Mortality due to Alzheimer's has registered an increase of 9.9% this year.

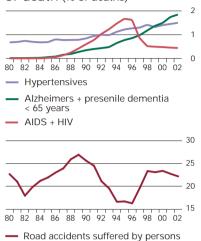

Among men, the most frequent cause is ischaemic heart disease (22,281 deaths) followed by lung cancer with 15,979 deaths.

Infectious diseases

Contagious or infectious diseases may spread morbidity and/or mortality from one side of a country to another and even across a continent.

In 1993 the World Health Organisation took the decision to declare tuberculosis a global emergency. In the European Union in 2001, the Baltic states had the highest rates and these values were more than double those registered in 1990. In EU-15 countries, only Portugal registered a high value (42.9%).

Hospital infrastructure

The total number of hospitals, according to the National Hospitals Catalogue on 31 December 2003, is 774, with an average capacity of 203.4 beds, 59.9% of these hospitals are general, 13.6% are geriatric or long stay and 11.8% psychiatric.

The Hospital Indicators Statistic for 2001 provides the indicator beds per 1,000 inhabitants which has a value of 3.6. There are also differences between autonomous communities, where this indicator varies between 2.7 in the Comunidad Valenciana up to 4.6 in Canarias or Cataluña.

Donations: global leadership

In 1992 Spain reached global leadership with respect to organ donation and transplant. In 2003 the number of donors for every million inhabitants was 34.

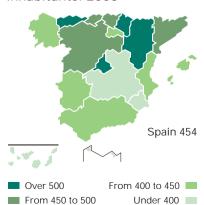

During 2004, Spanish hospitals carried out 2,125 kidney transplants (61 live donors) and more than 1,000 liver transplants (18 live donors).

There is an increasing number of women doctors

In 2003 there were 190,665 registered doctors in Spain, of which nearly 60% were men. Although, if we only considerer those under 45,56% are women. In the case of pharmacists and nursing graduates, the percentage of women, 68% and 81.6% respectively, is higher than that of men; this prevalence appears in all ages.

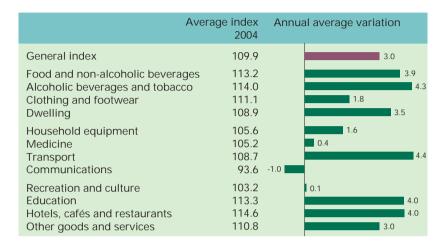

More than 45% of registered doctors and nurses are under 45.

CPI. 2004

The inflation rate is 3.0%

2004 closed with an annual average variation rate of 3.0%, as in 2003. If we analyse the index's behaviour according to different expenditure groups, we can highlight that the transport group (4.4%) and alcoholic beverages and tobacco (4.3%) have the highest annual average growth rate.

Within the shopping basket, there is more positive variation from the financial services (18.8%), potatoes and derivatives thereof (16.2%), oils (15.8%) and greater negative variation is reflected in computer equipment (-21.9%) and photographic and cinematographic equipment (-9.7%).

From a territorial point of view, three autonomous communities have average annual inflation above the national average: Cataluña (3.5%), Región de Murcia (3.4%) and Castilla-La Mancha (3.1%); Ceuta y Melilla (3.7%) also exceed the national average. Among the communities with the lowest inflation rate are Canarias (2.3%) and Extremadura (2.5%).

Most expenditure on housing and food

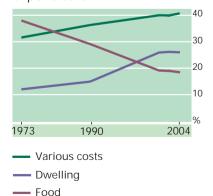

According to the Continuous Household Budget Survey, average expenditure per household in 2004 stood at 22,688 euros; 5.5% more than the previous year.

By groups, apart from "various expenditure" which represents 41.3% of average expenditure by households, the second highest expenditure entry is for housing with 26.3% and thirdly, food with 18.6%.

Within total expenditure on food, Spanish households put 25% of expenditure towards meat, 13.2% to fish and 13.9% to bread, pasta and cereals.

Average expenditure by person for the whole country stands at 7,779.4 euros. Comunidad de Madrid with 9,283.4 euros, has the highest average expenditure, exceeding national expenditure by 19.3%. Extremadura with expenditure of 5,675.4 euros, registers the lowest expenditure, 27% less than the national average.

Expenditure on social protection in Spain is less than the average of the EU-15

In 2003, there was a 2.5% increase in total social protection benefits by inhabitant with respect to the previous year. The greatest increase occurred in health benefits with 3.5%.

Within social protection benefits, the greatest relative weight related to the ageing and survival group which represents 48.7% of total expenditure, followed by disease and health care with 30.2%, due to increased ageing of the Spanish population.

With respect to social security pensions in 2003, the number of contributory pensions grew by 1% with respect to the previous year, compared with noncontributory pensions which only grew by 0.5%. Within contributory pensions, the pension for widowhood experienced the highest increase (1.6%).

In 2001, social protection in Spain measured in terms of social protection expenditure as a percentage of GDP was 7.5 percentage points below the EU-15 average.

Evolution of built housing

We prefer to buy rather than rent

In agreement with data from the Population and Housing Census, the amount of housing varied from 17.2 million in 1991 to 20.9 million in 2001 which represented growth of 22% in ten years. The number of main dwellings increased to 14.2 million and second dwellings to 3.4 million. Empty dwellings (25.5%) similarly experienced strong growth varying from 2.5 million in 1991 to 3.1 million in 2001.

When studying dwellings according to tenancy regime, the predominant weight of owned housing (82%) compared to rented housing (11.4%) is noteworthy. Illes Balears, Canarias, Cataluña and Comunidad de Madrid registered the highest percentages of rented housing whilst in Castilla-La-Mancha, País Vasco and Comunidad Foral de Navarra, the lowest rates were observed. In comparison with other countries, in Spain people are less likely to rent.

In the last few years in our country, the high rhythm of construction of our housing has been maintained.

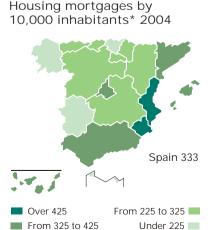

According to Mortgage Statistics, in 2004 the number of housing mortgages increased by 11.3% with respect to 2003 whilst loaned capital increased by 26.6% and exceeded 122 million euros. An interannual increase of 13.8% was registered for the average mortgage amount and stood at 110,226 euros.

* Population aged 20 to 85 on 1 July 2004

Composition of households. 2001.

The average size of the household is decreasing...

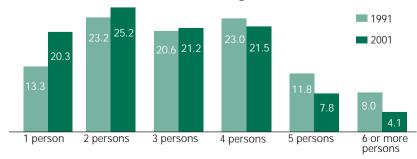

Population and Housing Census 2001 data reflect that in Spain, there were major changes in the structure and size of households during the 1991-2001 decade: the number of households, 14,187,169, increased by 19.7%; single person households changed by nearly 1.6 to 2.9 million; the number of couples with 4 children or more reduced (from 485 to 176 thousand); couples without children increased (from 2 to nearly 2.5 millions) and households made up of one family and another non-related person multiplied by nearly 5.

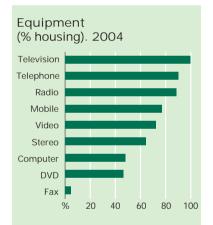

... and the age people leave home and the number of elderly who live alone is increasing

The census also showed us that young people are leaving home ever later: of the total of persons aged 25 to 34 years (nearly 7 million), 37.7% were still living with their parents (43.5% of men and 31.7% of women).

Nearly a million and a half of the 6.8 million persons aged 65 and over live alone with a ratio of 3 to 1 in favour of women. Among persons aged 75 and over, the percentage of single person households increases up to 35%.

Distribution of households according to number of members

According to the Survey on Equipment and Use of Communication and Information Technologies in Households with data from the second quarter of 2004, 48.1% of households have some type of computer compared to 43.3% in the same period of 2003. 46.4% of households have a DVD. Comunidad de Madrid (58.2%), Cataluña (54.7%) and País Vasco (52.6%) are notable for having more computer equipment in their households.

In Spain there are 4,544,751 households with Internet access, one million more than in 2003. 45.5% of the population aged 15 and over have used a computer and 37.5% have surfed the net.

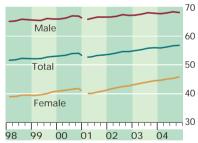

Novelties in the EAPS 2005

The Economically Active Population Survey (EAPS) has been modified in 2005 due to various reasons: the need for it to adapt to the new demographic and labour reality of our country, due mainly to the increase in the number of foreign residents; the incorporation of the new European regulations following EUROSTAT regulations; and finally, the introduction of improvements in the collection method.

The National Statistics Institute has revised the 1996-2004 series of the EAPS to adjust its results to the increase in resident population in Spain.

Activity rate

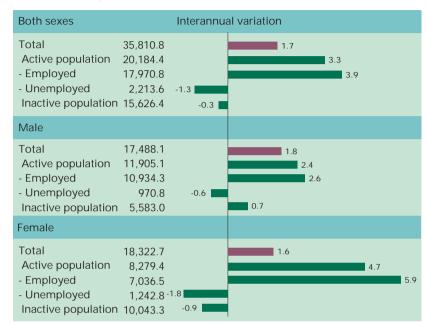

Since the first quarter of 2001 there has been a jump in the unemployment, active and inactive series due to the change in the definition of unemployment.

Unemployment rate

Population aged 16 and over according to their relationship with the labour activity and sex. 2004 (thousands of persons)

The activity rate for women is around 46%

According to the Active Population Survey, the total number of active persons in Spain was 20.2 million persons in 2004. The activity rate for both sexes stands at 56.4% of the population aged 16 and older. The employment rate for women continues to increase and in 4Q 2004 was 45.8%.

The interannual employment growth rate is 3.9%. This increases more for employed women (5.9%) than for men (2.6%). By autonomous communities, the number of employed persons increases in all of them especially in Comunidad Valenciana (5.7%), La Rioja (5.6%) and Región de Murcia (5.4%).

By sectors, occupation in 2004 grew basically in construction (7.2%), in the services sector (4.7%) and to a lesser extent in industry (0.3%). On the other hand, this reduces for agriculture (-0.2%).

The number of wage-earnes increased by 593,400 persons and stood at 14.7 million persons which represents 4.2% more than a year ago; the main increase appearing in the private sector (4.4%) compared to the public sector (3.4%). On the other hand, there is also an increase in the number of freelance workers of 2.7% compared to the previous year.

Employed by professional situation. 2004 (thousands of persons)

^{*} Persons who work without remuneration regulated in the family company.

The unemployment rate is decreasing and is positioned at 11%

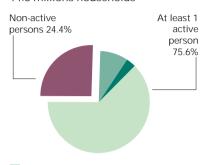

The number of unemployed persons in Spain in 2004 stood at 2.2 million. The unemployment rate has decreas in five decimals with respect to 2003 and is 11% of the active population. The female unemployment rate is 15%, nearly twice the figure for men (8.2%).

By communities, Extremadura with an unemployment rate of 17.2% and Andalucía with 17.1% present the highest rates; the lowest rates correspond to the Comunidad Foral de Navarra (5.5%) and Aragón and La Rioja (5.6%). On a provincial level, Cádiz and Córdoba have the highest rates, 22.7% and 20.8% respectively; however, Soria (4.3%), Teruel (4.6%) and Lleida (4.7%) have the lowest unemployment rates.

The unemployment rate for under 25s (22%) is double the general rate. The difference between sexes is notable: 26.4% women and 18.7% men.

The Wage Structure Survey 2002 is a four yearly statistical operation which investigates the distribution of salaries based on variables such as sex, occupation, activity branch, service or size of company.

Workers with a determined duration contract had 40% less annual average salary than that corresponding to indefinite contracts.

University graduates received an annual salary greater than 67% of the average salary. For its part, the salary of workers who do not have any qualifications is 35% less than the average salary.

Total wage cost by worker and month

Gross wage cost by worker and month Interannual variation rate

The Comunidad de Madrid has the highest labour cost

Labour cost is defined as the cost which the employer incurs by use of the labour factor. According to 2003 data, the Annual Labour Cost Survey elaborated by the INE, average labour cost by worker and year was 24,091.7 euros in 2003 which represents growth of 4% with respect to the previous year.

By activity sectors, the greatest labour cost is industry with a total net cost per worker and year of 27,672.9 euros (4.7% more than in 2002), followed by services (23,212.2 euros and growth of 3.6%) and construction (with 22,652.9 euros, 5.6% more).

In 2003 labour cost per worker was 24,304.2 euros in gross terms. If 212.5 euros received from the public administration are deducted as subsidies and deductions, the annual net cost stood at 24.091.7 euros.

The Spanish economy has experienced growth of 2.7% in 2004

Gross Domestic Product (GDP) at market prices in 2004 is estimated at 798,672 million euros. The real growth of the Spanish economy (annual variation rate of GDP at constant prices) is 2.7% which means that the annual average increase for our economy during 2000-2004 is 2.55%.

GDP per capita at current prices was 19,456 euros in 2004 nationally, 6.6% higher than the previous year.

For 2003, Eurostat estimates GDP per inhabitant in terms of purchasing power parity (PPP) for Spain at 89.7% taking the 15 former member states as a reference and 97.6% taking the EU-25 as a reference. In eight years this indicator has increased more than 10 points as it was 87.5% in 1995.

Comunidad Foral de Navarra is leading real growth in the economy

Comunidad Foral de Navarra is the region which experienced higher real growth of its economy (3.4% estimated variation of its GDP at market prices). Illes Balears is the community which experienced less dynamism in its economy in 2004. Real growth of its GDP is estimated at 1.7%.

From 1995 to 2004 Comunidad de Madrid was the community which most increased its relative participation in the whole national economy, approximately 0.6 points up to 17.4%. This is followed by Andalucía with an increase of 0.4 points up to 13.8% and Comunidad Valenciana and Canarias with an increase of 0.3 points which facilitates reaching participation levels of 9.7% and 4.1% respectively.

The communities which have lost the most relative weight in this same period are Cataluña and Castilla y León (-0.5 points for each one).

As for GDP per capita only 7 communities exceed the national average. Comunidad de Madrid and Comunidad Foral de Navarra are those which have registered the highest value (25,855 and 24,690 euros respectively). Conversely, Extremadura (12,886) and Andalucía (14,876) have the lowest values.

Financing the Spanish economy

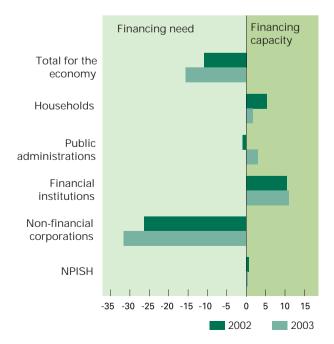

In 2003, households maintained their savings at 10.6% of disposable income. This result, similar to the previous year, results from some similar increases (around 6%) in disposable income and final consumption expenditure.

Household investment increased by 12.5%, mainly due to the increase in property investment, which grew above 14%.

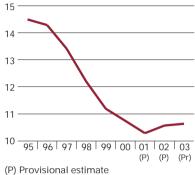

The Spanish economy needs external financing of 15,553 million euros, 4,636 million more than in 2002. The financing need is estimated at 2.1% of GDP at market prices, five decimals more than the previous year.

Both non-financial companies, households and NPISH (non-profit institutions at the service of households) had a worse financial situation in 2003 with respect to the previous year (5,338; 3,525 and 289 million euros respectively). Public administrations and financial institutions increased their financing capacity by 3,972 million euros and 544 million euros respectively.

Capital balance surplus

The Balance of Payments from the Bank of Spain indicates that the balance by current and capital account of the Spanish economy shows a deficit of 12,065 million euros, 32% higher than that registered in 2002. In terms of GDP this balance is 1.6% compared with 1.3% the year before.

The surplus of the capital balance whose performance depends in practice on EU capital transfers, given the scarce importance of private transfers, was extended in 2003 by 13.2% to 8,762 million euros. GDP therefore stands at 1.2%, one point more than in 2002.

In 2003, the international environment was more favourable to the recovery of international movements than the preceding year. Strong net outflow for portfolio investments were registered, unlike the previous year, whilst direct investment net inflow were moderated. Direct Spanish investment abroad was significantly higher in the 2nd semester with respect the 1st semester of 2003, whilst this behaviour was not observed for direct foreign investment in Spain.

We import more than we export

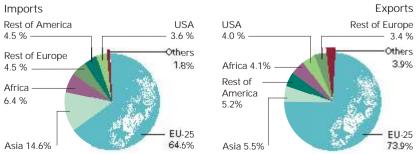

In 2004, exports from Spain totalled 146,452.1 million euros which represents growth of 6.3% with respect to 2003. 2004 closed with growth of nearly a percentage point with respect to the previous year. Imports (207,125.5 million euros) grew by 12.5%, growth was much higher than that obtained in 2003 (6.5%).

The main products exported are industrial, automobiles and food, beverages and tobacco. The increase in energy product exportation should be highlighted (90.6%).

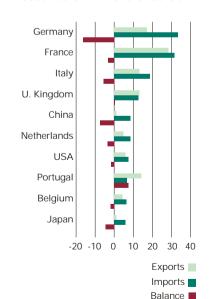

The import of all products with respect to 2003 has increased with the exception of consumer energy products and other capital goods.

Spanish exports to the EU-25 (73.9% of the total) in 2004 grew 4.8%. Imports coming from the EU-25 increased by 9.8% which represent 64.6% of the total of Spanish purchases.

Mercantile Companies Statistic

The objective of this statistic is to measure company demography, collect information on mercantile companies created, those dissolved and those that have undergone capital modifications.

The number of mercantile companies created in 2004 increased by 4.9% with respect to 2003, whilst subscribed capital increased 6.9%. More than 40,000 companies increased capital, with an interannual decrease of 3.1%.

Of the 11,913 companies dissolved over this period, more than 85% did so voluntarily and 10.5% by merger.

Comunidad de Madrid and Cataluña accumulate 49.5% of underwritten capital in the creation of mercantile companies and 62.9% corresponding to capital increases. The autonomous communities where average underwritten capital is greater are Comunidad de Madrid (117,238 euros) and País Vasco (117,184 euros). With respect to capital increases, the highest average underwritten capital was registered in Cantabria with 3.3 million euros and Comunidad de Madrid with 1.9 million.

Suspensions of payments and declarations of bankruptcy by main activity. 2004 (%)

Suspensions of payments and declarations of bankruptcies*

From January to August 2004 there have been 242 suspensions of payments and 501 declarations of bankruptcy. The main reason for which companies declared suspensions of payments is lack of liquidity (59.5% of the total) whilst low productivity was the less frequent cause.

* Provisional data

Suspensions of Payments and Declarations of Bankruptcies Statistics collects information on the number of Suspensions of payments and declarations of bankruptcies files instigated in the Courts of First Instance. Due to the publication of Organic Law 8/2003 of 9 July, for Insolvency Proceedings Reform and Insolvency Proceedings Law 22/2003 which entered into force on 1 September 2004, previous legislation on this subject was substantially modified. Therefore, publication of the suspensions of payments and declarations of bankruptcies statistics is definitively suspended. The INE has already started to collect information for the elaboration of a new statistic adapted to the current insolvency proceedings law.

There are nearly 3 million companies

The number of active companies has increased by 4.6% in 2003 up to 2.9 million according to the latest update from the Central Companies Directory (CCD) on 1 January 2004. The CCD gathers, all Spanish companies and local units located in the country in a single information system. It generates information on company demography: registrations, time in the directory and deregistering. The largest increases in the number of companies occur in construction (8.7%) and in other services (5.8%).

More than half of them do not have wage-earners

51% of companies, more than one and a half million, do not have any wage-earners, whilst 818,000 (27.8% of the total) have between one and two employees. If only companies with wage-earners are considered, companies with one or two employees represent 56.7% of the total whilst companies who employ 20 or more workers only represent 5.4% of the total. The majority of small companies are for the rest of services sector (83.1% employ two wage-earners or less) and trade (81.3%). Conversely, the weight of large companies is concentrated on industry (9.3% of the total employ 20 or more wage-earners).

366,000 new companies in 2003

With respect to the temporal evolution, it is worth noting that 366,000 companies (11% of the total) started to exercise economic activities during 2003 whilst 243,000 (7.6% of the total) stopped their activities. Nearly 81% of economically active units in 2003 already had this situation the previous year. 48.3% of Spanish companies are concentrated in Cataluña, Andalucía and Comunidad de Madrid.

^{*} Non-profit institutions serving households (NPISH)

Internal R+D expenditure on regional GDP (%). 2003

Internal R+D expenditure as 1.1% of GDP

According to the statistic on R+D activities, internal research and development expenditure stood at 8,213 million euros in 2003 with an increase of 14.2% with respect to 2002. The barrier of 1% of GDP (1.1%) has been exceeded for the second time.

By execution sectors, R+D private sector expenditure (NPISH and companies) represents 54.3% of total expenditure and stands at 0.6% of GDP. For its part, public sector expenditure (Public administration and Higher education) represents 45.7%, i. e. 0.5% of GDP.

R+D activities are mainly financed by the private sector (48.8%) and by the public administration (40.1%). Funds coming from abroad and higher education represent the remaining 11.1% of total R+D expenditure.

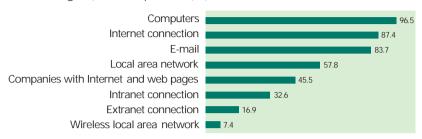

Less women in research

151,487 persons worked on R+D tasks full time during 2003 which represents 8 per thousand of the active population. The group of researchers reaches the figure of 92,523 persons/year. i. e. 4.9 per thousand of the active population. 36.5% of R+D personnel are women. The highest percentages are for NPISH (59.3%) and the public administration (47.5%) whilst in companies this percentage does not exceed 28%.

Comunidad de Madrid, País Vasco, Comunidad Foral de Navarra and Cataluña are the autonomous communities which efforts R+D activities and in all cases exceed 1.3% of GDP. The rest of the communities present intensity figures undes the national average for R+D expenditure.

Use of various CIT (Communication and Information Technologies) in companies (%). 2003

Internet envelops us

According to the Survey on the use of CIT and e-commerce in companies, 87.4% of companies with 10 or more wage-earners had an Internet connection in 2003 compared with 81.6% the previous year. 45.5% of companies with an Internet connection have a web site/page.

The majority use Internet to obtain banking and financial services (91%) and to observe market behaviour (43.2%). To access the network, 81.2% use broad band.

E-commerce sales increased by 33%

87.3% of companies use their web page to commercialise their products. In 2003, 3% of companies had e-commerce sales. The turnover generated was 33,307 million euros, 33% more than in 2002.

Companies that makes sales by means of the Internet stand at 1.7% of the total. The turnover generated by these transactions was 3,837 million euros, 2% more than the previous year. Tourism is the sector where the highest number of companies sell over the network.

(1) Data referring to operations greater or less than 1 Ha. AAU or with a certain economic importance

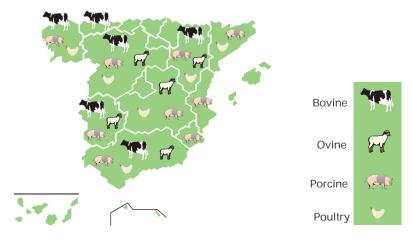

Lesser but larger operations

Data from the Structure of Agricultural Operations Survey 2003 confirm a trend towards greater specialisation in agriculture, which translates into a decrease in the number of operations and an increase in the average size of operations.

Thus, it is worth noting that since 1999 nearly 147,000 operations have disappeared whilst the average agricultural area used by operation is 22.07Ha., which represents an increase of 8.6% with respect to the 20.32 Ha. for 1999.

Castilla y León, Aragón and Extremadura are the communities with the highest average agricultural areas used (51.19 Ha., 42.63 Ha. and 39.18 Ha. respectively). They are followed by Comunidad de Madrid, Castilla-La Mancha, Comunidad Foral de Navarra and Cantabria with value that exceed the national average. At the other extreme are Canarias (with an average of 3.81 Ha.) followed by Comunidad Valenciana (with 4.59 Ha.) and Galicia (with 7.10 Ha.).

Decrease in vegetal production...

Due to the varied in climate and different types of soil in the different areas of the country there is a major diversity within Spanish agriculture.

The value of vegetal production in 2003 is around 24 thousand million euros. Although the value increased by 3.5% with respect to 2002, the amount decreased by 4.9%. Despite this, the production of some crops (or derived products) increases; specifically, olive oil production underwent the most significant annual increase: from 879 thousand tonnes in 2002 to 1387 in 2003.

In 2001, Spanish final agricultural production represented around 12% of all EU-15 Member States.

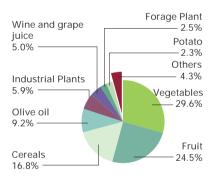

... compared to an increase in animal production

However, both the value (4.2%) and quantity (2.7%) of animal production in 2003, nearly 13.5 thousand million euros, increased with respect to 2002. The total production of milk, the majority of which comes from cows, is around 2,203.4 million euros; and the production of eggs is around 1,061.7 including hens, ducks, turkeys and geese.

The large dependence on oil

Production of primary energy increased by 3% in 2003 with respect to the previous year and is 29,304 ktep. The degree of basic autosupply, similar to 2002, is 22.1% although in the case of hydraulic and nuclear energy this is 100%.

In Spain, oil which represents 52.3% of primary energy demand, comes mainly from Russia, Libya and Mexico. Natural gas, 16% of primary energy consumed is imported mainly from Algeria.

The interannual rate for consumption of final energy, 97,124 Ktep, increased this year by 5.4%. To this end, 61.8% corresponds to oil products, 19.5% to electricity, 16.2% to gas and 2.5% to coal.

Electricity, 51.3% of industrial energy consumption

Energy consumption by industrial companies exceeded 7,000 million euros in 2003, 3.9% higher than 2001 according to the Energy Consumption Survey. The main energy consumption used are electricity (51.3% of the total), gas (23.8%) and oil products (gas-oil, fuel-oil and others) which represents 19.4%.

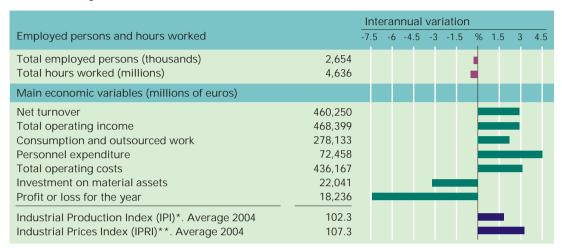

Moving towards renewable energies

The European Union is working towards encouraging renewable energies (solar, wind...), with the objective of reducing energy dependence on oil and natural gas. Its objective is that 12% of EU consumption come from renewable energy sources by the year 2010.

Electricity consumption from renewable energy sources in 2002, represented 14.4% of the total which places us in ninth position within the EU.

Main industry variables. 2003

^{*} Short term indicator that measures the monthly evolution of the productive activity of industrial branches, excluding construction.

Turnover in the industrial sector increased by 2.9%

The Industrial Companies Survey is an annual structural survey whose main objective is to provide information on the various sectors that constitute industrial activity.

The net amount of industrial companies turnover stood at 460.3 million euros in 2003, with an increase of 2.9% with respect to the previous year. The number of employed persons in the sector is nearly 2.7 million, 0.3% less than in 2002.

The majority of companies' operating income is represented by product sales which are 386.1 million euros with an increase of 2.9% with respect to 2002. This is followed by sales of goods (51.1 million euros, 2.8% more than in 2002) which represents 10.9% of total income and then services provisions (23.1 million euros, 3.9% more than in 2002) which represent 4.9%.

As for expenditure, consumption of raw materials is in first place (42.5% of total operating expenditure). In second and third place are personnel expenditure (16.6% of the total) and external services (15%).

Companies with more than 100 employees represent 63.6% of industrial turnover

Activity groups which registered higher increases in turnover in 2003 with respect to the previous year are transport material (which underwent an increase of 8%), food, beverages and tobacco (3.9%) and the chemical industry (3.8%).

Conversely, those that make a greater contribution to total industrial sector turnover are food, beverages and tobacco (16.8% of the total), transport material (13.4%) and metallurgy and manufacture of metallic products (11.5%).

By analysing the industrial corporate structure by the size of the company (expressed as the number of employees) it can be observed that companies with 1,000 persons or more represent 27% of total industrial turnover. This percentage rises to 63.6% if companies with more than 100 employees are considered.

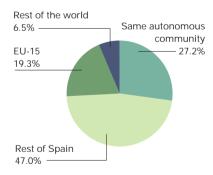

Three communities contribute 47.6% of the total turnover

Cataluña (115,706 million euros), Comunidad de Madrid (52,869 million) and Comunidad Valenciana (50,467 million) make up 47.6% of total industrial sector turnover. The highest increases in turnover in 2003 occurred in Aragón (7.7%), Castilla y León (6.2%), Canarias (5.8%) and Andalucía (5.3%). Conversely, there was a reduction in Illes Balears (2.3%), La Rioja (0.3%) and Principado de Asturias (0.2%).

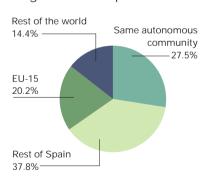

In companies with 20 or more employees, sales within Spain represented 74.2% of the total, whilst those to EU-15 countries represented 19.3%. With respect to purchases, 20.2% of raw materials, goods etc. originate from EU-15 countries and 14.4% from the rest of the world. Purchases within Spain represent 65.3% of the total.

In these companies, total industrial investment represents 21,560 million euros, of which 34.2% corresponding to technical facilities, 31.6% to machinery and tools and 11.7% to investment on intangible assets.

Services

Evolution of market services (% of GDP)

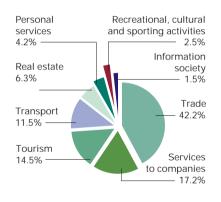

Main market variables service*. 2002

^{*} Economic variables in millions of euros

Number of companies. 2002

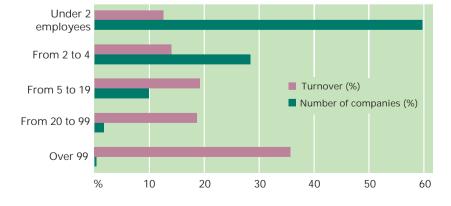

Services sector, the economy's motor

The Services Sector in our country is the most important in terms of GDP and job creation. According to data from the National Accounts, in 2002 market services represented 50.8% of GDP and provided jobs for 43.8% of employed persons.

The Annual Services Survey indicates that there are 1,861,837 companies in Spain dedicated to trade, tourism, transport, information technologies, real estate activities, services to companies, recreational and cultural activities and personal services. These activities represent 83% of the added value generated by market services.

Services sector structure by size of the company. 2002

^{**} Considering common activities both years

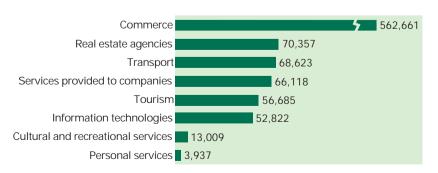

Turnover in the services sector in 2002 stood at 894,211 million euros, which represents an increase of 7.1% with respect to 2001. Activity groups which present higher increases with respect to the turnover invoiced in 2002 are real estate and rental activities (14.0%) and information technologies (11.8%), 70,357 and 52,822 million euros respectively.

Within the market services sector analysed, trade represents 63% of total turnover whilst the rest of the groups analysed are between 6% and 8% with the exception of cultural and recreational serboces (1.5%) and personal services (0.4%).

25% of turnover corresponds to the Comunidad de Madrid

The autonomous communities with higher participation in the market services sector are Comunidad de Madrid (25%), Cataluña (20%), Andalucía (12%) and Comunidad Valenciana (9.8%). This concentration is more marked in services provided to companies where 60% of the turnover is generated in the Comunidad de Madrid and Cataluña, as well as services related to information technologies is which 55% of business is invoiced in the Comunidad de Madrid.

Investment in the services sector

Market services companies invested 62,327 million euros during 2002, 7% of their turnover. By activity groups, real estate companies and transport services were those which increased the most their productive capacity, by acquiring investment goods with a value exceeding 15% of their invoicing.

Material investment	Millions of euros
Total	52,972
Land	7,324
Hardware	2,047
Buildings	9,666
Constructions	15,867
Transport elements	8,168
Machinery	4,282
Other	5,618

Material investment stands at 52,972 million euros. In transport companies the highest percentage (29%) is used for transport elements; in the tourist sector 43% of this investment is for construction and renovations of buildings; in real estate companies the highest percentage of investment is for land and natural assets (21%).

7.4 million persons working

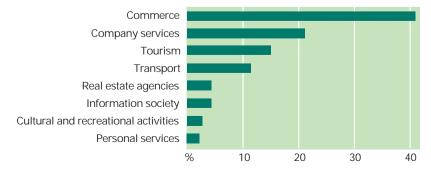

The average number of employees in services sector companies stood at 7.4 million persons in 2002 (4.5% more than in 2001). By activity sectors, various corporate services and real estate activities are those that generated the most employement during that period with increases of 30.3% and 17.4% respectively.

Nearly a quarter of sector employees are freelance workers. This percentage stands at 78% for taxi transport.

As for female participation, 42.3% of sector employees are women. Female personnel reaches its highest percentage in personal services in which more than three quarters of employees are women. The participation of women in cleaning services is 78.3%.

Spaniards are saving tourism

According to the INE Hotel Tourism Short Term Survey and Holiday Apartment Occupancy Survey, there was a decrease in the number of overnight stays of non-residents in Spanish tourist accomodation of 3.6% with respect to the previous year; conversely, overnight stays for Spaniards increased by 8.4%.

The British and Germans are the nationalities who visit Spain most frequently

The nationality of origin of travellers varies from one establishment to another. 81.1% of overnight stays in apartments corresponds to non-residents; but in the case of rural tourism this is only 17.3%.

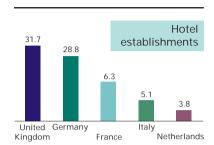

In hotels and apartments, the United Kingdom predominates (31.7% and 44.1% of overnight stays of non-residents respectively); in the case of camp sites the Netherlands predominates (25.5%), and Germany predominates for rural tourism accommodation (40.6%).

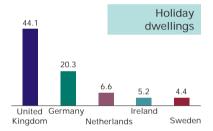

The longest average stays occur in holiday dwellings. Evolution over the year is variable, although this is longer for all types of accommodation in July and August, with the exception of camp sites where the longest stays are in January and February.

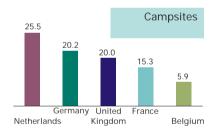

The Hotel Tourism Short Term Survey includes the Hotel Establishment Occupancy Survey, Hotel Income Index and Hotel Price Index

The non hotel Tourist Accommodation Occupancy Survey groups the Occupancy Surveys in Holiday Dwellings, Campsites and Rural Tourism Accommodation.

^{*}Data refers to degree of occupancy by lots

Average estimated size of hotel establishments 2004

Number of vacancies by establishment

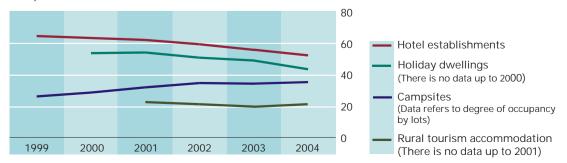

Increase in tourist offer

Vacancies offered by the different types of Spanish tourist accommodation increased in 2004 with respect to the previous year. More than 50% of these correspond to hotel establishments (1,173,884 average estimated vacancies in 2004).

Hotel establishments are mainly concentrated in Andalucía, Illes Balears, Cataluña and Canarias; more than half the supply of apartment vacancies are in Canarias and campsites are mainly located in Cataluña, Andalucía and Comunidad Valenciana. Rural tourism accommodation, however, are distributed over the whole country, but especially in the North of the peninsular.

The degree of occupancy by vacancies decreased respect to 2003 for hotels and apartments but rural tourism accommodation increased. The degree of occupancy in campsites increased. For Spanish tourist accommodation the highest occupancy was registered for the month of August.

Evolution of degrees of occupancy by vacancy in Spanish tourist accommodation

Favourist destinations of Spanish travellers. 2004 (% overnight stays)

Hotels		Apartments		Campsites		Rural tourism	
Andalucía	20.8	Canarias	27.1	Cataluña	40.1	Castilla y León	18.8

Increase of 1.5% in hotel tariffs

The Hotel Price Index (HPI) measures the evolution of the main tariffs that hoteliers apply to all their customers. An average increase of 1.5% was registered for the year 2004. Prices increased in all autonomous communities except in Illes Balears and Comunidad Valenciana, where there were average decreases of 0.2% and 0.8% respectively.

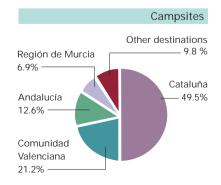

The highest interannual price increases occur in summertime.

For its part, income by occupied room which measures the Hotel Income Index (HII) increased by an average of 3.5% in 2004 with respect to 2003.

Nearly 40% of passengers travel by subway

In 2003 the number of urban transport users increased by 2.8% with respect to 2002. More than a third of these passengers use the subway although only Madrid, Barcelona, Bilbao and Valencia have a subway system.

The number of passengers who use intercity transport is similar to that registered in 2002. Within this sector, the bus is the most used means of transport (66.1%) followed by rail (31.8%).

Domestic air transport registered less passengers in 2003 than international air transport; in the case of maritime transport this situation reversed.

Travelling to work by car

According to data from the Population and Housing Census 2001 the preferred means of transport to go to work is private transport (64%) compared to 16% for public transport. 42% of employed persons make two or more trips a day to go to work and the average time used is 22 minutes. Nearly 70% of households have at least one vehicle (excluding motorcycles). The average number of vehicles per household is 0.95.

The relationship between population and number of vehicles was 620 vehicles per 1,000 inhabitants in 2004.

More roads ...

The number of kilometres increased once again, especially in large capacity roads (freeways motorways and dual carriageways) whose interannual rate increase was 4.7%.

... and more cars, but imported

The total number of registered automobiles increased by 12.9% in 2004 with respect to the previous year; the same figure for motorcycles underwent the most significant variation (58.9%). As has been occurring since 1994, the number of registered vehicles stemming from imports (1,609,712) has exceeded the figures for registrations stemming from national manufacture (539,368).

Gas-oil vehicles represent 44.1% of total vehicles in 2004. For private cars, the use of this fuel went from a total of 13.2% in 1994 to 38.4% in 2004.

Women at the steering wheel

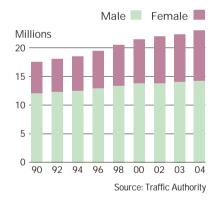

More than 8 million women have a driver's licence (38.9% of total drivers) and another 568,000 with a motorcycle drivers licence (27%) according to data from the drivers census to 31 December 2004.

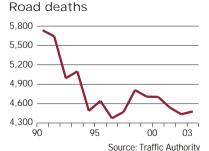

The total number of persons who have a driver's licence is 23,019,420. Barcelona and Madrid with more than 1,000,000 are the provinces with the highest number of women with a driver's licence.

100,000 traffic accidents

Unfortunately, the interannual rate of the number of road accidents with road and urban area victims (99,987) has increased by 1.6%, with 5,399 deaths and 150,635 casualties registered (1% and 2.5% more than the previous year respectively).

Drivers census

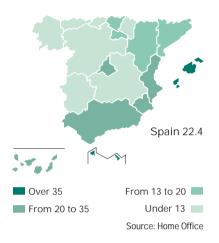

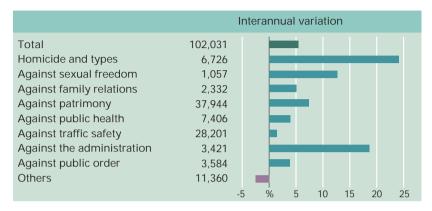

Justice

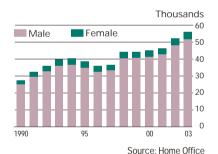

Reported crimes by 1,000 inhabitants. 2003

Convicts according to crimes committed. 2002

Prison population to 31 December

9 out of every 10 convicts are males

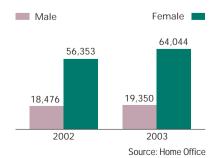

According to data from the Judicial Statistics, in 2002 in Spain more than 100,000 persons were convicted of committing a crime. 91.8% of the convicts were males. The most frequent crime committed was theft.

The percentage of foreign convicts with respect to total convicts this same year was 10.6%. The countries of origin are not the same for men as for women: men come mainly from Morocco and other African countries and women conversely come mainly from American and European countries. The number of foreign convicts has increased from 7,244 in 1996 to 10,780 in 2002 which represents an increase of 48.8%.

If we limit ourselves to reported crime (by the police) we find that in Spain 22.4 crimes were committed per 1,000 inhabitants in 2003, a value less than that registered in 2002 (24.3 per thousand). Illes Balears (51.5), Ceuta (47.6) and Melilla (41.4) have the highest rates.

The prison population to 31 December 2003 was 56,096 in mates ; 8.1% higher than the previous year.

Victims of family abuse

Domestic violence is on the rise

The number of family abuse victims increased in 2003 by 11.4% and the figures were 64,044 women and 19,350 men. 78.2% of women are abused by their spouse or partner. However, in the case of men, this percentage is much lower, 45.8%.

General elections. March 2004

Participation in the general elections...

General elections Parliamentary were held in Spain on 14 March 2004, in other words, to the Congress and the Senate, which represent legislative power. Since approval of the constitution (1978) elections have been held on eight occasions, 350 members of parliament and 208 senators were elected.

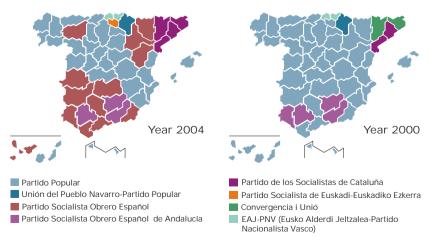

Participation was 75.7% which represents an increase with respect to the elections in March 2000, which was 68.7%.

... abstention in the European elections

On 13 June 2004, Spain held its fifth elections to the European Parliament, which is an institution that represents the people of the European Union States. Of its 732 members of parliament, 54 represent Spain. The first time that Spaniards elected its representatives in Europe was in June 1987. Elections of this type have been held subsequently in June 1989, June 1994 and June 1999.

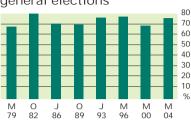

Abstention was 54.9% in Spain in 2004 compared to 37.0% in 1999.
